EXPERIENCE

United Neuroscience Institute Current

Developer & digital operations

Bakersfield, California

Built NEUR.ON, the practice's internal scheduling, shift-management and payroll app — Next.js, React, Supabase (PostgreSQL, Auth, row-level security), on Vercel. Six-role permission model with multi-tier approval chains for assignments, peer-approved swaps, and PTO with hour-balance validation, designed for 26 users. Deployed to an internal environment and in testing rollout.

Hardened it for real use rather than for a demo: row-level security on every table, helper functions with pinned search_path, CSP and HSTS headers, per-IP rate limiting, zod validation, CSV formula-injection sanitising, and geofenced clock-in with an IP fallback.

Run on-page and local SEO and content structure for the practice's website. An April 2026 local-search audit found three separately indexed domains to canonicalise, no city in any title tag, a miscoded Google Business Profile and no dedicated service pages; the site has since been rebuilt off WordPress as a static build and cut over to the live domain in August 2026, with service and provider pages, structured data and analytics in place.

Beyond Epilepsy Secretary since July 2026 Volunteer board role

Secretary & website developer

California nonprofit public benefit corporation, Kern County · 501(c)(3) public charity, IRS determination June 2026

Build and maintain the organisation's website — first as a custom WordPress theme, then ported to a static site now live on Vercel. Led a redesign that was verified accessible rather than assumed: zero axe-core WCAG violations, contrast at 4.5:1 or better with most above 7:1, 16px minimum type, 44px tap targets, and decorative texture capped at 2–2.5% opacity as a deliberate seizure-safety constraint.

Replaced a recurring manual schedule edit with a timezone-correct function that computes the next meeting dates on the fly — first Tuesday online, third Tuesday hybrid — with overrides for cancellations and one-offs, and kept contact details, the Zoom link and the donate URL in one place the board can edit without a developer.

Authored the outbound email and SMS communications plan — platform selection, CAN-SPAM and TCPA consent requirements, toll-free verification versus 10DLC, and SPF/DKIM/DMARC fixes. Written and specified; not yet launched.

Independent client work 2026 – current Client work

Web designer & developer

A Bakersfield surgical practice: designed and built the practice site on Squarespace with hand-coded service pages for three procedure lines, custom scroll and counter animations, and a typography consolidation pass. Wrote the privacy and terms pages and the consent wording required for carrier registration, and held every credential claim for client sign-off rather than publishing it unverified. Launch pending on the client's side.

Flooring Mart: built a product data pipeline from scratch — vendor and product scraping, image ingestion, structured CSV schemas for collections, accessories and price lists — plus workflow diagrams modelling the operation's real bottlenecks, and a feasibility study on ERP integration. Engagement on hiatus.

Also independent: the St. Chavara Mission parish site and the Nonstop Energy site, now live, both in the work index.

Modulium Earlier

Project manager — insulation & cost analysis

Ran insulation and thermal analysis for a refrigerated-trailer concept at a refrigeration startup: mathematical modelling of dimensions, surface area, insulation volume and cost, and an EPS-versus-XPS tradeoff across R-value, cost efficiency and food-safe suitability.

SELECTED WORK — 5 PROJECTS

PROJECT	TYPE	STACK	STATUS
United Neuroscience Institute	Website & SEO	Static build · Local SEO	unitedneuroscience.org ↗
St. Chavara Mission	Parish website	Next.js 16 · Tailwind v4	Pending launch
Nonstop Energy	Company website	Next.js · three.js	nonstopenergy.us ↗
Beyond Epilepsy	Nonprofit website	Static build · Accessibility	beyondepilepsy.org ↗
NEUR.ON	Internal web app	Next.js · Supabase	Internal

SKILLS

FRONT END

React / Next.js (App Router) / TypeScript / JavaScript / Tailwind CSS / HTML & CSS /
three.js / R3F / Responsive & reduced-motion UI

BACK END & DATA

Supabase / PostgreSQL schema design / Row-level security / Passwordless email OTP /
zod validation / Resend transactional email / CSV import/export pipelines / REST & third-party APIs

SECURITY & ACCESS CONTROL

Role-based access control / Multi-tier approval workflows / Middleware auth enforcement /
Rate limiting / Input validation & sanitising / CSP & HSTS headers / Secrets hygiene

SITES, CMS & SEARCH

WordPress custom themes (PHP) / Elementor / Squarespace custom code / Content architecture /
On-page SEO / Local SEO & Google Business Profile / NAP consistency / Metadata, sitemaps & robots

DESIGN & ACCESSIBILITY

UI/UX design / Design tokens & systems / Logo & brand / Typography / WCAG & axe-core testing /
Contrast & tap-target discipline / prefers-reduced-motion / Screen-reader QA

DELIVERY & TOOLING

Git & GitHub / Vercel (previews, env vars, domains) / DNS, SSL & provider cutover / Playwright / npm /
Production build verification

CURRENTLY LEARNING

Schema markup & structured data / Core Web Vitals / Canonicalisation & crawl budget /
Automated testing / CI/CD / Stricter TypeScript

BACKGROUND

No completed degree. Everything on this page was learned by building it and shipping it for people who were waiting on it — live sites for a neurology practice and an epilepsy nonprofit, a parish site, a surgical practice site, an exporter demo, and an internal scheduling and payroll app.

The work runs past the front end into content structure, search, accessibility and internal tooling, because most of it has been for organizations where a website isn't decoration — it's how someone finds a support group, books a neurologist, or decides whether a supplier is worth an email.

Bakersfield, California. Mostly Next.js, React and Supabase, with WordPress where a client needs to edit their own pages.
